Notes to Financial Statements May 31, 2020

1. Organization and Business

Barrington Research Associates, Inc. (the "Company"), was incorporated in the State of Illinois on June 1, 1983. The Company is registered as a broker-dealer ("BD") in securities under the Securities and Exchange Act of 1934 and is a member of the Financial Industry Regulatory Authority (FINRA). The Company is engaged in trading securities on recognized United States security exchanges, investment banking, financial advising, and underwriting for private placements of securities, and provides research services.

2. Summary of Significant Accounting Policies

Revenue Recognition and Securities Valuation

Securities transactions and related income and expenses are recorded on a trade date basis that does not differ materially from the settlement date basis. Securities owned are recorded in the statement of financial condition at market value.

Commission revenue and related expenses on equity securities and research revenue are recorded as earned on an accrual basis.

Investment banking fees include underwriting, corporate finance, and designation fees. They are recorded when all services are completed under the terms of the engagements. Associated expenses are deferred in order to match the related revenue or until the related engagement is completed.

The Company recognizes revenue in accordance with Financial Accounting Standards Board Accounting Standards Codification ("FASB ASC") Topic 606, Revenue from contracts with customers. That guidance was amended to require public business entities to recognize revenue to depict the transfer of promised goods or services to customers in an amount that reflects the consideration to which the entity expects to be entitled in exchange for those goods or services. The amendment is effective for the Company for fiscal years beginning after December 15, 2017.

Leases

The Company recognizes leases in accordance with FASB ASC Topic 842, Leases. The guidance was amended to require public business entities to recognize a right of use asset and a lease liability in the statement of financial condition. The amendment is effective for the Company's fiscal year beginning after December 15, 2018 with early adoption permitted. Management believes the impact of Topic 842 has no material impact on its operations. The Company recognized a right of use asset and lease liability of \$1,784,823 and \$1,792,881, respectively as reported on the statement of financial condition as of May 31, 2020.

Income Taxes

Deferred income taxes are recorded to reflect the future tax consequences of difference between the carrying value of assets and liabilities for income tax and financial reporting purposes, and for the benefits of tax credit and loss carryforwards. The amounts of any future tax benefits are reduced by a valuation allowance to the extent such benefits are not expected to be fully realized.

Notes to Financial Statements, Continued May 31, 2020

2. Summary of Significant Accounting Policies, Continued

Income Taxes, Continued

The Company adopted FASB ASC topic 740 during 2009, which clarifies the accounting for uncertainty in income taxes recognized in an enterprise's financial statements. FASB ASC 740 prescribes a recognition threshold and measurement attribute for the financial statement recognition and measurement of a tax position taken or expected to be taken in a tax return.

FASB ASC 740 also provides guidance on de-recognition of tax benefits, classification on the balance sheet, interest and penalties, accounting in interim periods, disclosure, and transition.

The Company continues to evaluate uncertain tax positions, if any, and income tax contingencies under FASB ASC topic 450 Accounting for Contingencies. FASB ASC 450 requires the Company to accrue for losses it believes are probable and can be reasonably estimated. Management believes the impact of FASB ASC 740 on its financial position and results of operations has an immaterial effect on its financial statements. The Company is not subject to examination by U.S. federal or state authorities for current and prior three tax years.

Use of Estimates

The preparation of financial statements in conformity with U.S. Generally Accepted Accounting Principles requires management to make estimates and assumptions that affect the amounts reported in the financial statements and the accompanying notes. Management determines that the estimates utilized in preparing financial statements are reasonable and prudent. Actual results could differ from these estimates.

Securities Valuation

Securities are recorded at fair value in accordance with FASB ASC 820, Fair Value Measurement and Disclosure (see note 3).

3. Fair Value Measurement and Disclosure

FASB ASC 820 defines fair value, establishes a framework for measuring fair value, and establishes a hierarchy of fair value inputs. Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. A fair value measurement assumes that the transaction to sell the asset or transfer the liability occurs in the principal market for the asset or liability or, in the absence of a principal market, the most advantageous market. Valuation techniques that are consistent with the market, income or cost approach, as specified by FASB ASC 820, are used to measure fair value.

The fair value hierarchy prioritizes the inputs to valuation techniques used to measure fair value into three broad levels.

 Level 1. Quoted prices (unadjusted) in active markets for identical assets or liabilities that the Company can access at the measurement date.

Notes to Financial Statements, Continued May 31, 2020

3. Fair Value Measurement and Disclosure, Continued

- Level 2. Inputs other than quoted prices included within level 1 that are observable for the asset or liability either directly or indirectly.
- Level 3. Unobservable inputs for the asset or liability.

The availability of observable inputs can vary from security to security and is affected by a wide variety of factors, including, for example, the type of security, the liquidity of markets, and other characteristics particular to the security.

To the extent that valuation is based on models or inputs that are less observable or unobservable in the market, the determination of fair value requires more judgment. Accordingly, the degree of judgment exercised in determining fair value is greatest for instruments categorized in level 3.

The inputs used to measure fair value may fall into different levels of the fair value hierarchy. In such cases, for disclosure purposes, the level in the fair value hierarchy within which the fair value measurement falls in its entirety is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

The Company assesses the levels of the investments at each measurement date, and transfers between levels are recognized on the actual date of the event or change in circumstances that caused the transfer in accordance with the Company's accounting policy regarding the recognition of transfers between levels of the fair value hierarchy. There were no significant transfers among levels 1, 2, and 3 during the year.

The Company values its investments based on the following principles and method of valuation:

Investments in equities and equities options listed on an exchange and which are freely transferable are valued at their last sales price on such exchange on the date of valuation. To the extent these securities are actively traded, and valuation adjustments are not applied, they are categorized in Level 1 of the fair value hierarchy. Preferred and other equities traded on inactive markets or valued by a dealer quotations or alternative pricing source or model supported by observable inputs are classified within Level 2.

Exchange-traded equity securities and options are generally valued based on quoted prices from the exchange. To the extent these securities are actively traded, valuation adjustments are not applied, and they are categorized in level 1 of the fair value hierarchy; otherwise, they are categorized in level 2 or level 3 of the fair value hierarchy.

Securities sold short, not yet purchased represent obligations to purchase such investments at a future date. The value of the open short position is recorded as a liability, and the Company records an unrealized appreciation or depreciation to the extent of the difference between the proceeds received and the value of the open short position. The Company records a realized gain or loss when the short position is closed out. By entering into short sales, the Company bears the market risk of increases in value of the security sold short in excess of the proceeds received.
